

F10  
Extensions of **While**

Lennart Andersson

Revision 2009-04-22

2009

Extensions

$S ::= x := a \mid skip \mid S_1; S_2 \mid \text{if } b \text{ then } S_1 \text{ else } S_2 \mid \text{while } b \text{ do } S$

1. *abort*
2.  $S_1 \text{ or } S_2$
3.  $S_1 \text{ par } S_2$
4. *begin*  $D_V$   $S$  *end*
5. *begin*  $D_V$   $D_P$   $S$  *end* | *call*  $p$

$S_1 \text{ or } S_2$ , natural semantics

$$\frac{\langle S_1, \sigma \rangle \rightarrow \sigma'}{\langle S_1 \text{ or } S_2, \sigma \rangle \rightarrow \sigma'} \quad \frac{\langle S_2, \sigma \rangle \rightarrow \sigma'}{\langle S_1 \text{ or } S_2, \sigma \rangle \rightarrow \sigma'}$$

$S_1 \text{ or } S_2$ , structural operational semantics

$$\langle S_1 \text{ or } S_2, \sigma \rangle \Rightarrow \langle S_1, \sigma \rangle$$
$$\langle S_1 \text{ or } S_2, \sigma \rangle \Rightarrow \langle S_2, \sigma \rangle$$

## $S_1$ par $S_2$ , structural operational semantics

$$\frac{\langle S_1, \sigma \rangle \Rightarrow \sigma'}{\langle S_1 \text{ par } S_2, \sigma \rangle \Rightarrow \langle S_2, \sigma' \rangle}$$

$$\frac{\langle S_1, \sigma \rangle \Rightarrow \langle S'_1, \sigma' \rangle}{\langle S_1 \text{ par } S_2, \sigma \rangle \Rightarrow \langle S'_1 \text{ par } S_2, \sigma' \rangle}$$

$$\frac{\langle S_2, \sigma \rangle \Rightarrow \sigma'}{\langle S_1 \text{ par } S_2, \sigma \rangle \Rightarrow \langle S_1, \sigma' \rangle}$$

$$\frac{\langle S_2, \sigma \rangle \Rightarrow \langle S'_2, \sigma' \rangle}{\langle S_1 \text{ par } S_2, \sigma \rangle \Rightarrow \langle S_1 \text{ par } S'_2, \sigma' \rangle}$$

## Blocks

$S ::= x := a \mid \dots \mid \text{begin } D_V \ S \ \text{end}$   
 $D_V ::= \text{var } x := a; \ D_V \mid \epsilon$

```
begin
  var y:= 1;
  x:=1;
  begin
    var x:=2;
    y:=x+1
  end
  x:=x+y
end
```

(ambiguous representation)

## Blocks and declarations

$$\frac{\langle D_V, \sigma \rangle \rightarrow_D \sigma' \quad \langle S, \sigma' \rangle \rightarrow \sigma''}{\langle \text{begin } D_V \ S \ \text{end}, \sigma \rangle \rightarrow \sigma'' [DV(D_V) \mapsto \sigma]} [block_{ns}]$$

$$\langle \epsilon, \sigma \rangle \rightarrow_D \sigma \quad [empty_{ns}] \quad \frac{\langle D_V, \sigma[x \mapsto \mathcal{A}[a]\sigma] \rangle \rightarrow_D \sigma'}{\langle \text{var } x := a; \ D_V, \sigma \rangle \rightarrow_D \sigma'} [var_{ns}]$$

and  $[DV(D_V) \mapsto \sigma]$  restores the values of the variables in  $DV(D_V)$ .

## Procedures

$S ::= \dots \mid \text{begin } D_V \ D_P \ S \ \text{end} \mid \text{call } p$   
 $D_V ::= \text{var } x := a; \ D_V \mid \epsilon$   
 $D_P ::= \text{proc } p \ \text{is } S; \ D_P \mid \epsilon$

```
begin
  var x:= 0;
  proc p is x:=x*2;
  proc q is call p;
  begin
    var x:=5;
    proc p is x:=x+1;
    call q;
    y:=x;
  end
end
```

## Scope rules

1. dynamic scope for variables and procedures
2. dynamic scope for variables but static for procedures
3. (static scope for variables but dynamic for procedures)
4. static scope for variables and procedures

## Different scope rules

```
begin
  var x:= 0;
  proc p is x:=x+2;
  proc q is call p;
  begin
    var x:=5;
    proc p is x:=x+1;
    call q;
    y:=x;
  end
end
```

variables	procedures	y=
dynamic scope	dynamic scope	6
dynamic scope	static scope	10
static scope	static scope	5

## Procedure environments

$$Env_P = Pname \rightarrow Stm$$

A procedure environment maps procedure names to procedure bodies.

## Transition with procedure environment

$$env_P \vdash \langle S, \sigma \rangle \rightarrow \sigma'$$

In the procedure environment  $env_P$  the statement  $S$  transforms  $\sigma$  into  $\sigma'$ .

## Procedure semantics, dynamic scope rules

$$env_P \vdash \langle x := a, \sigma \rangle \rightarrow \sigma[x \mapsto \mathcal{A}[[a]]\sigma]$$

$$env_P \vdash \langle \text{skip}, \sigma \rangle \rightarrow \sigma$$

$$\frac{env_P \vdash \langle S_1, \sigma \rangle \rightarrow \sigma' \quad env_P \vdash \langle S_2, \sigma' \rangle \rightarrow \sigma''}{env_P \vdash \langle S_1; S_2, \sigma \rangle \rightarrow \sigma''}$$

## Procedure semantics, dynamic scope rules

The rules for `if` and `while` are also unaffected by the procedure environment.

## Procedure semantics, dynamic scope rules

$$\frac{\langle D_V, \sigma \rangle \rightarrow_D \sigma' \quad upd_P(D_P, env_P) \vdash \langle S, \sigma' \rangle \rightarrow \sigma''}{env_P \vdash \langle \text{begin } D_V \ D_P \ S \ \text{end}, \sigma \rangle \rightarrow \sigma'' [DV(D_V) \mapsto \sigma]}$$

where  $upd_P(D_P, env_P)$  is  $env_P$  updated with the definitions in  $D_P$ .

## Updating the environment

$$upd_P(\epsilon, env_P) = env_P$$

$$upd_P(\text{proc } p \text{ is } S; D_P, env_P) = upd_P(D_P, env_P[p \mapsto S])$$

## Procedure semantics, dynamic scope rules

$$\frac{env_P \vdash \langle S, \sigma \rangle \rightarrow \sigma'}{env_P \vdash \langle \text{call } p, \sigma \rangle \rightarrow \sigma'}$$

where  $S = env_P p$

## Static scope rules for procedures

Modified procedure environment

$$upd_P(\epsilon, env_P) = env_P$$

$$upd_P(\text{proc } p \text{ is } S; D_P, env_P) = upd_P(D_P, env_P[p \mapsto (S, env_P)])$$

Non-recursive procedures

$$\frac{env'_P \vdash \langle S, \sigma \rangle \rightarrow \sigma'}{env_P \vdash \langle \text{call } p, \sigma \rangle \rightarrow \sigma'}$$

where  $(S, env'_P) = env_P p$

## Static scope rules for variables and procedures

$$Loc = \mathbb{N}$$

$$Env_V = Var \rightarrow Loc$$

$$Store = Loc \cup \{\text{next}\} \rightarrow \mathbb{Z}$$

$$new \in Loc \rightarrow Loc$$

## Static scope rules for variables and procedures

$$env_V, env_P \vdash \langle x := a, sto \rangle \rightarrow sto[\ell \mapsto v]$$

where  $\ell = env_V x$  and  $v = \mathcal{A}[[a]](sto \circ env_V)$

The rules for skip, ;, if and while are essentially unchanged.

## Static scope rules for variables and procedures

$$\frac{\langle D_V, env_V, sto \rangle \rightarrow_D (env'_V, sto') \quad env'_V, env'_P \vdash \langle S, sto' \rangle \rightarrow sto''}{env_V, env_P \vdash \langle \text{begin } D_V \ D_P \ S \ \text{end}, sto \rangle \rightarrow sto''}$$

where  $env'_P = upd_P(D_P, env'_V, env_P)$

## Static scope rules for variables and procedures

$$\frac{env'_V, env'_P[p \mapsto (S, env'_V, env'_P)] \vdash \langle S, sto \rangle \rightarrow sto'}{env_V, env_P \vdash \langle \text{call } p, sto \rangle \rightarrow sto'}$$

where  $(S, env'_V, env'_P) = env_P \ p$
