

Project Mission (PM) – Mobile poker application

Background

In the last few years the online poker-community has grown faster than anyone could expect. So far, most applications have been limiting players to sit in front of their personal computers. What we would like to see is a product which takes advantage of the continuously growing mobility in our society.

Application

The application we are looking for is a mobile poker client. Here are some of our expectations:

- * We want to be able to play Texas Hold'em (the most common poker version)
- * There should be support for playing with real-money
- * The system has to be secure, especially considering transactions involving credit cards etc, as well as reliable regarding cheating.
- * The application should be portable and be able to run on most mobile devices
- * We want to be able to use the software anywhere, anytime without any significant data traffic-cost.
- * The application should be fun and easy to use!

Your role

You are either a provider of online betting-services with your own development department, or a sub-contracted software company working for the service provider.

Our role

We are a group of poker-playing fanatics who are tired of sitting by our desktop computers. We want to be able to play poker on the go!

Our role is potential customers who *might* buy the product if you meet our eager expectations.

Good luck!

// Group B: Jacob Frey-Skött (c02jfr), John Lunde-Flenmark (c02jlu), Johan Stenlund (c02js), John Ström (c02jst), Marcus Widerberg (c02mwi)
