FOOD application - Mission

Need

FOOD is in need of an application for their company where customers can shop for groceries.

Goal

FOOD wishes to have an application that the customer **wants to use** which will make the company business profitable.

Our part

The project is to supply the requirement specification for the said application. The application needs to give the customers **unique user experience** a **simple, effective and enjoyable** when buying food.

Prototype

Elicitation

REQUIREMENTS

Survey

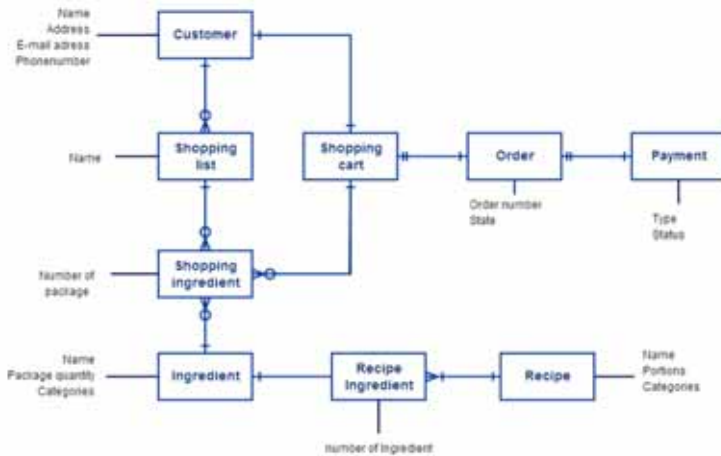

Consisted of two parts:

- General questions
- Specific questions about two prototypes
 - Prototype 1: Shopping lists and shopping cart
 - Prototype 2: Only shopping lists

Prototype 1 
Prototype 2 

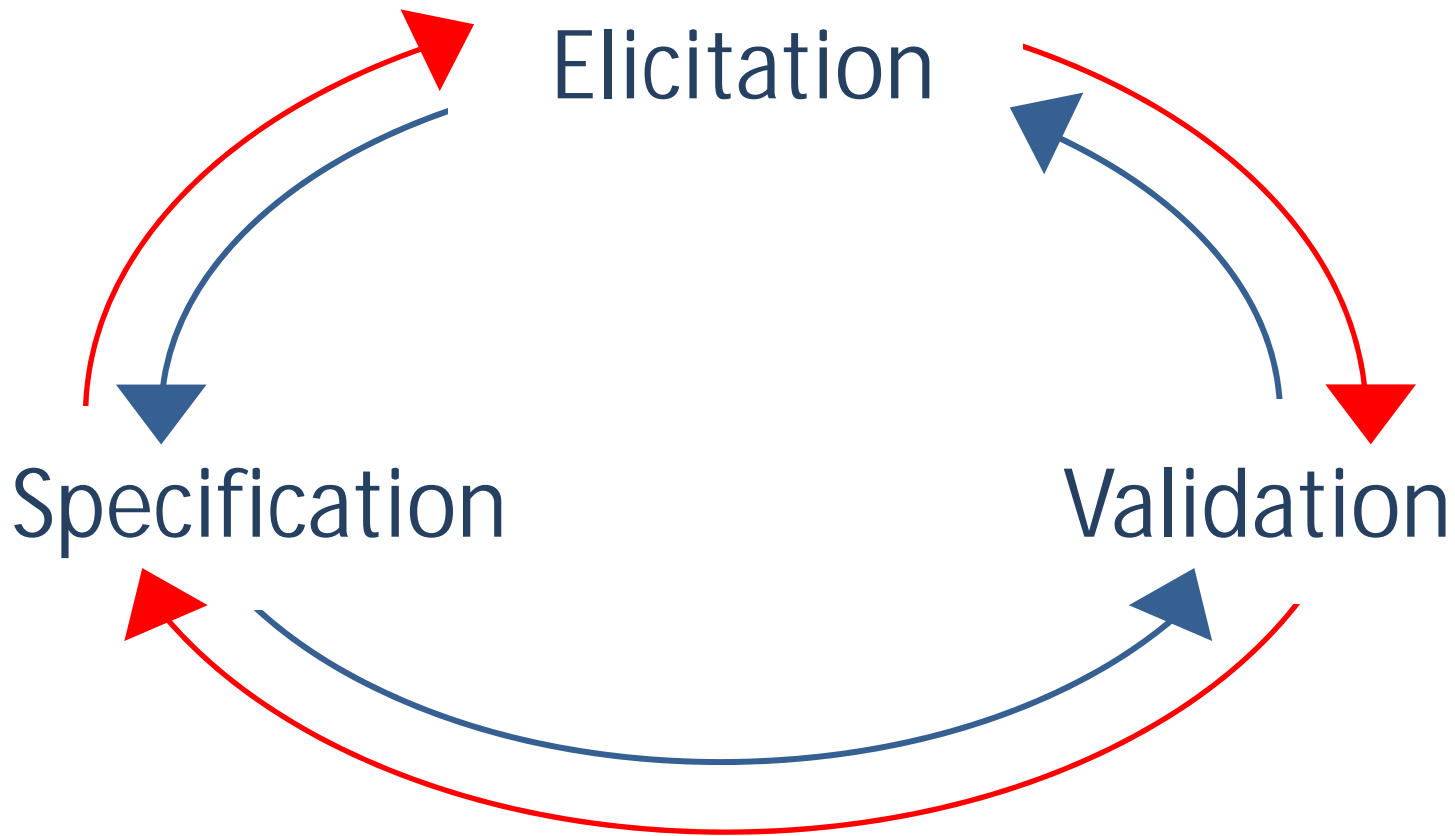

Specification

Data diagram
User Task

Context diagram
Function List

The importance of iteration

Experiences

Elicitation

What went well:

- Brainstorming
- Interview

Difficulties:

- Fictive project = fictive stakeholders
- Understanding and satisfying all stakeholders

Specification

What went well:

- Data diagram
- Context diagram

Difficulties:

- Finding the right method
- Structuring and hierarkies

Validation

What went well:

- Became aware of "blind spots"

Difficulties:

- Understanding the true consequences of problems

Learning outcomes

Elicitation

Specification

Validation

Understanding of concepts and techniques, and when to use them.

Importance of:

- Domain knowledge
- Clear goals
- Stakeholder input

Importance of:

- Knowledge of methods
- Structure

Importance of:

- Communication
- Clear structure
- Knowledge of the material
