

Logic: A Motivation

Knowrob: Why is knowledge so important?

- if the robot does not know about the task, the environment, or the robot, then the programmer has to hardcode **everything**

- programming/instructing at an abstract/semantic level
 - put the bolt into the nut and fasten it
 - pour water into the glass
 - ...

This Is Watson

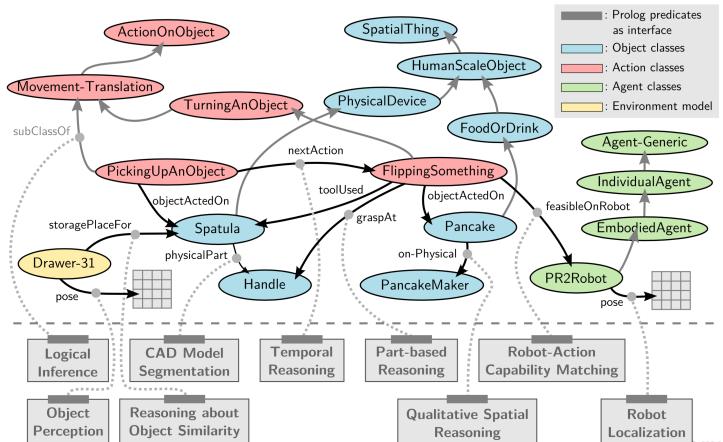

Knowrob: Ontology (knowrob.owl)

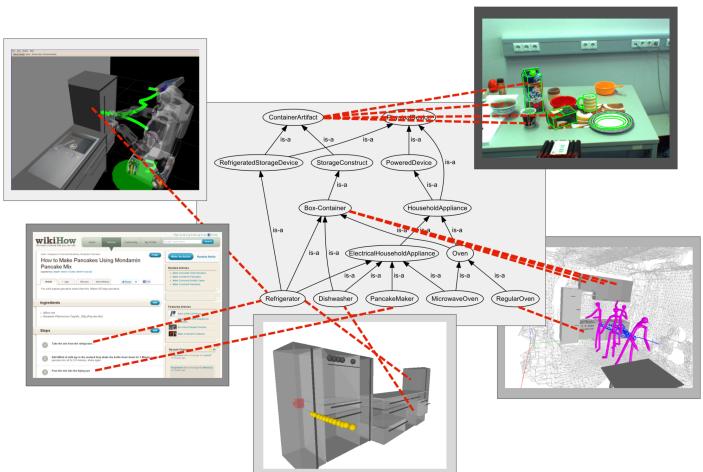

Knowrob: A task ontology

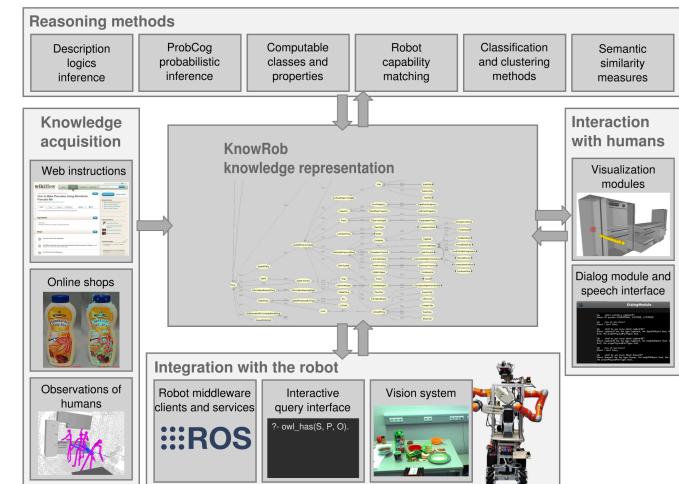

Knowrob: A task ontology

Knowrob: Knowledge types

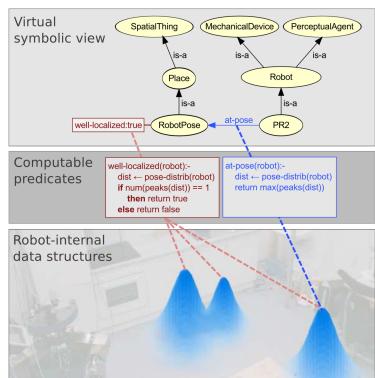

KnowRob Components

Knowrob: Procedural attachments

- Compute symbolic knowledge **on demand** from data structures that already exist on the robot by attaching procedures to semantic classes and properties
- Re-use existing information and make sure abstract knowledge is grounded

Knowrob: Summary

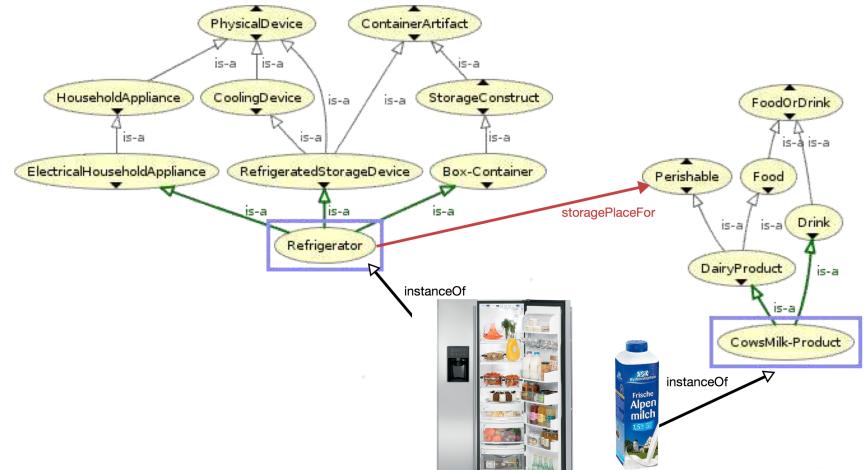

- declarative knowledge: ontologies
- procedural attachment
- logical inference
- multi-modal representation

Semantic Web

Linking Open Data cloud diagram, by Richard Cyganiak and Anja Jentzsch. <http://lod-cloud.net/>

Semantic Web

Lots of hype. Lots of acronyms. But some are important!

- URI – Uniform Resource Identifier
- RDF – Resource Description Framework
- RIF – Rule Interchange Format
- SPARQL – SPARQL Protocol and RDF Query Language
- OWL – Web Ontology Language

Open World Assumption!

A SPARQL query

What are all the country capitals in Africa?

```
PREFIX abc: <http://example.com/exampleOntology#>
SELECT ?capital ?country
WHERE {
  ?x abc:cityname ?capital ;
      abc:isCapitalOf ?y .
  ?y abc:countryname ?country ;
      abc:isInContinent abc:Africa .
}
```

SPARQL

W3C Recommendation

Queries:

- SELECT (returns a table)
- CONSTRUCT (returns RDF)
- ASK (returns a boolean)
- DESCRIBE (freedom)

Example:

```
PREFIX foaf: <http://xmlns.com/foaf/0.1/>
SELECT ?name ?email
WHERE {
  ?person a foaf:Person.
  ?person foaf:name ?name.
  ?person foaf:mbox ?email.
}
```

A real SPARQL query

<http://wiki.dbpedia.org/OnlineAccess>

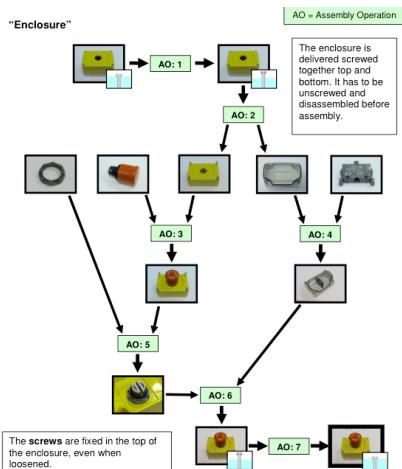

```
PREFIX rosetta: <http://kif.cs.lth.se/ontologies/rosetta.owl#>
select ?s where {
  ?s a rosetta:Device.}

select ?s where {
  ?s a rosetta:ManipulationAndHandlingDevice.}

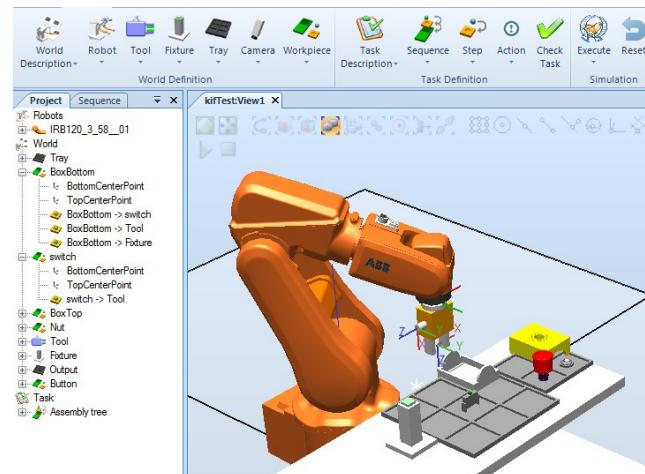

select ?s ?k where {
  ?s a rosetta:ManipulationAndHandlingDevice.
  ?s rosetta:hasSkill ?k.}

select ?s ?k where {
  ?s a rosetta:ManipulationAndHandlingDevice.
  ?s rosetta:hasSkill rosetta:VacuumGrip.}
```
