# Prediction of One-Year Survival after Heart Transplantation

---

By Daniel Dahlén, William Mauritzon

# The classification problem

Class 0	Class 1
The patient will not live longer than one year	The patient will live longer than one year

# Purpose of project

- Predict the classes based on patient data
- Identify some key features that contribute to mortality outcomes

# Data set

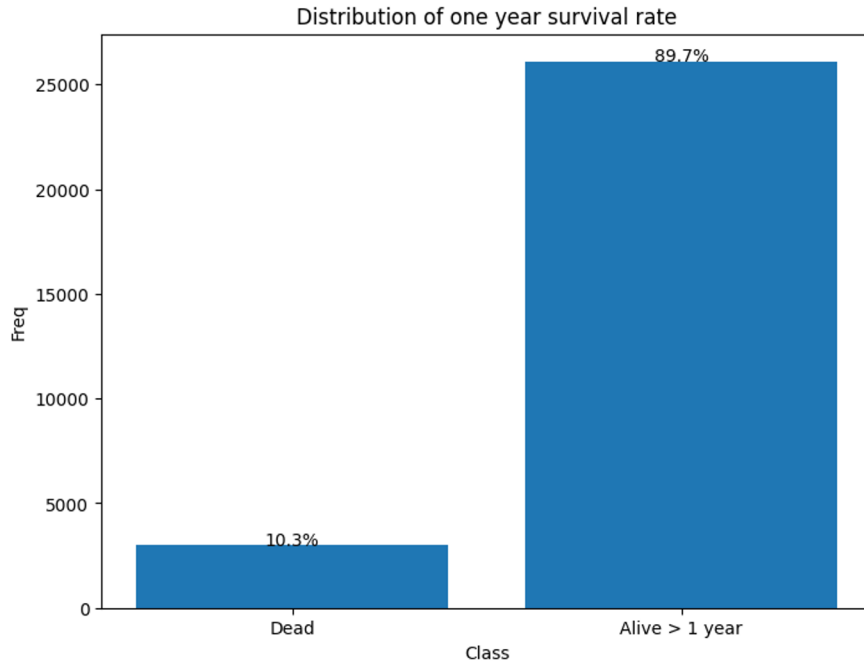

- The data set of heart transplant patients was gathered from the UNOS database (United Network for Organ Sharing)
- Data from 1987
- 500 variables including patient, donor, and transplant information.
- 120 000 patients
- Selected only Heart transplant patients
- 66 000 patients

# Target Class Distribution

- Imbalanced dataset

- Training data

- Test data

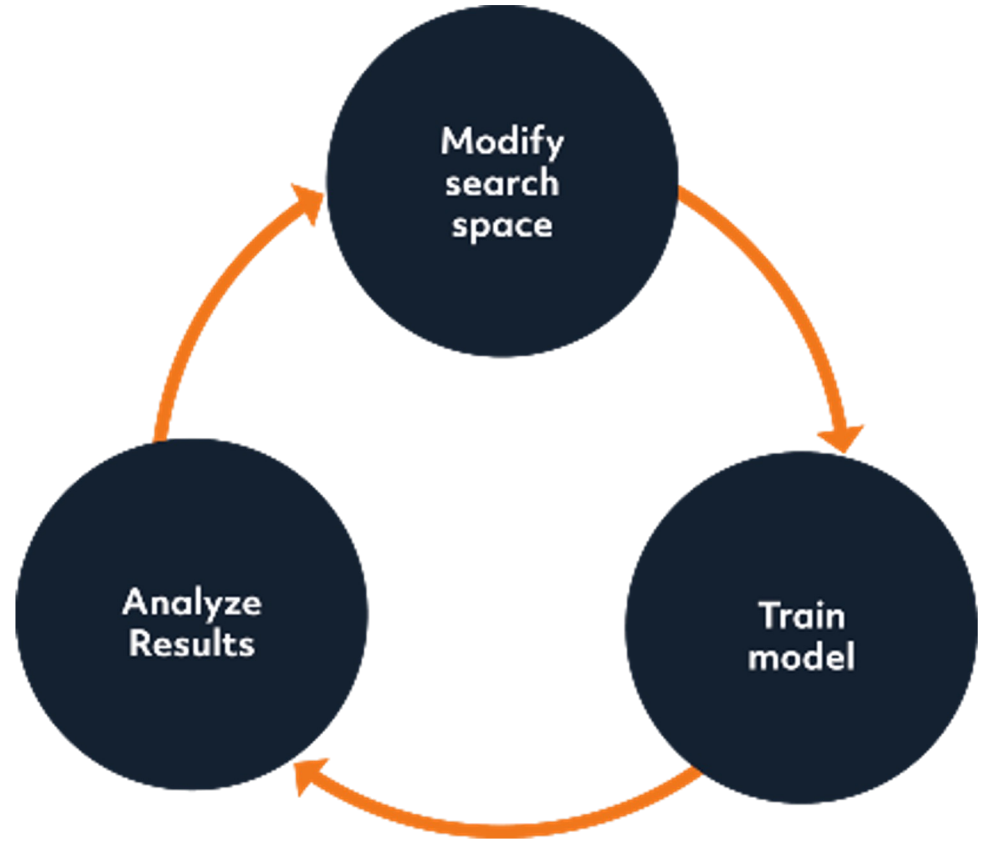

# Time of death

# Methodology

- Limitations
- Data handling
  
- Define model
- Train model
- Variable selection
- Model tuning
- Validating result

# Evaluation metrics

- AUROC
- F1
- F1 MACRO

$$\text{F1 Score} = \frac{TP}{TP + \frac{1}{2}(FP + FN)}$$

$$\text{Macro F1 Score} = \frac{\sum_{i=1}^n \text{F1 Score}_i}{n}$$

	Predicted 0	Predicted 1
Actual 0	TN	FP
Actual 1	FN	TP

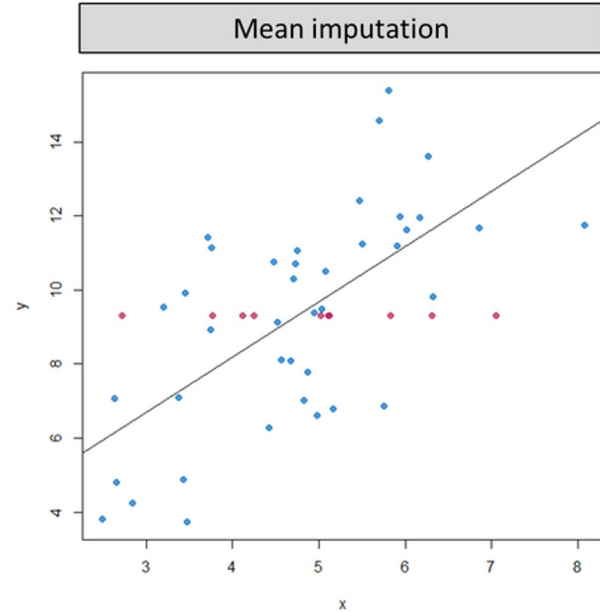

# Limitations

- Remove all patients under 18-years
- Remove columns with too many missing values
- Focused only on one-year survival

# Data Handling

- Merge similar features
- Impute missing values
- Normalize data set
- One hot encoding categorical features
- Remove outliers
- Divide data into test and training data

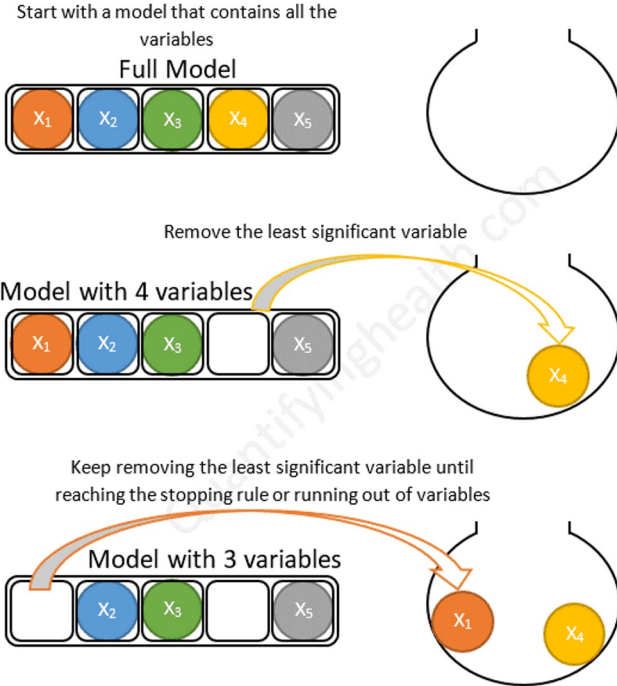

# Data Handling - merging of columns

Cyklosporin_ind	Cyklosporin_maint
Cellcept_ind	Cellcept_maint
Tacrolimus_ind	Tacrolimus_maint
ATG_ind	ATG_maint
Kortison_ind	Kortison_maint
Imuran_ind	Imuran_maint
mTOR_ind	mTOR_maint
monoclonalAB_ind	monoclonalAB_maint
other_ind	other_maint
cig_use	

# Variable Selection

- RFECV (Backward elimination)
- Cross validation
- Custom scorer (auc-roc)

Backward stepwise selection example with 5 variables:

# Model Tuning

- Gridsearch

```
param_grid = {'C': [0.01, 0.1, 1.0],  
              'penalty': ['l2'],  
              'class_weight': [None, 'balanced']}
```

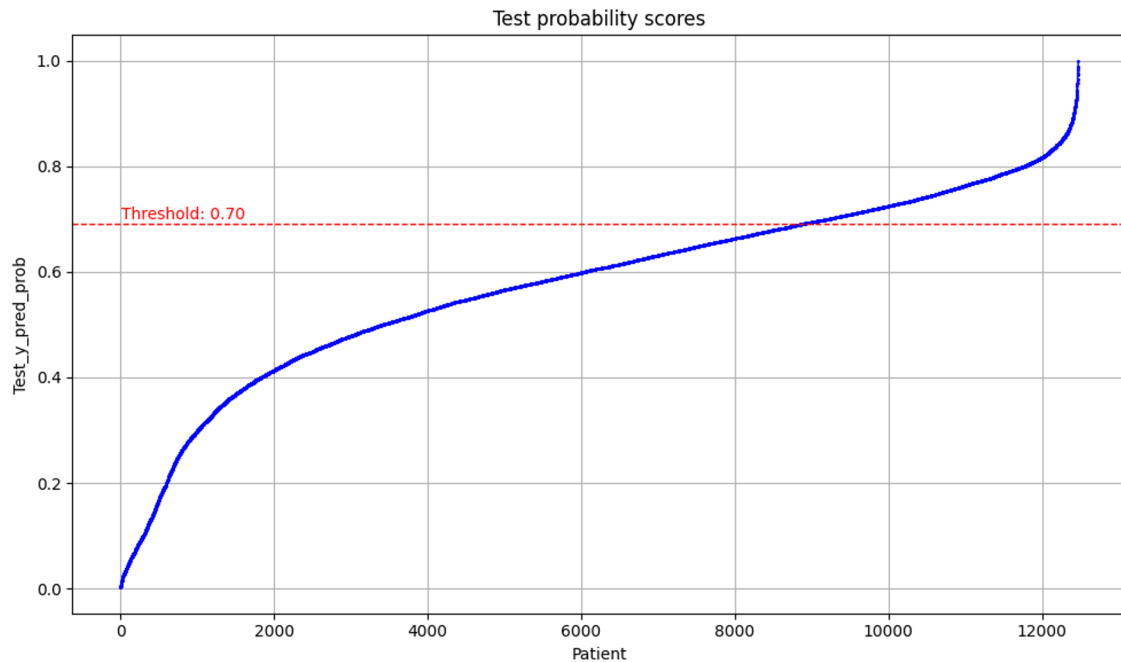

```
"C":0.1,  
"penalty": "l2",  
"class_weight": "balanced"
```

# Model Result

- **Logistic regression DX merged**
- **Neural Network - Keras - 64 nodes**
  - AUROC: 0.735
- **Random Forest**
  - AUROC: 0.72
  - F1 Macro: 0.59

Metric	Score
F1	0.947
F1_Macro	0.681
AUROC	0.740

# Threshold

# Best Model

```

# Conclusion

- Goal, most important features:
  - Medications +
  - No history of cancer +
  - Ecmo -
- Best performing model
  - Logistic regression
  - Auc-roc score: 0.740
- IHTSA model (2009–2011)
  - Auc-roc score: 0.654
