

## **James 007**

Secret agent support team:

*Andrej Cebular - Faculty of Mechanical Engineering - Ljubljana*  
*Malgorzata Piskorz - Faculty of Electronic Engineering - Gdansk*  
*Petar Adamovski - Technical University-Sofia*

Our agent is in-fact very complicated mechanical structure although on the first sight it really looks like a toy. We trained him to seek and conquer new undiscovered environment of a planet called 'Another Earth' (somewhere on the left side of the Milky Way). He is equipped with many secret weapons like Magic EYE which helps him to navigate through hostile terrain and he is able to find a path where nobody else can (that makes him a very unique and valuable pice of military machine)... James 007 also posses extremely sensitive touching device "not working bumpers" which can be also very effective weapon for other hostile agents. In each one of them he has a little nervous system, designed special for accurate and immediate reactions in the worst kind of situation (that for regular human being is impossible to imagine). Besides all above mentioned skills, he can also be a real gentleman with capability to whistle modern melodies (especially loved by young students in strange states of the mind), he uses this virtue to infiltrate into foreign society without being noticed. Under the colorful nice shaped body he hides 6 little nuclear power-plants called 'batteries' helping him to stay awake and prepared for action more than 20650040 ms without coffee-break. The artificial brain is made of trillions of little crystal structures called silicon semiconductor. He was trained with a special technique called IR and coded in NQC, just to prevent industrial espionage. As far as we know, he is now officially missed in action somewhere in south Sweden last spotted at a hippy party in Karhuset.

All these text is considered to be a TOP SECRET so this document will self-destruct in 4 ms.
