EDAF75
Database Technology
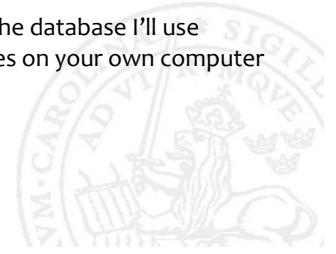

Lecture 2

Christian.Soderberg@cs.lth.se

January 22, 2026

Administration

- We need at least two course representatives, preferably one each for the C- and D-programs (and if someone else is interested, please come forward!)
- Have you managed to install Jupyter?
- We will have a QA-session on Friday
- On the course web site there's an empty notebook and the database I'll use today, if you download it you can try out today's examples on your own computer

Today

- A little bit more about subqueries
- Introduction to redundance, anomalies and splitting tables
- Joins
- The remainder of the lecture will be spent in the notebook
