

# Greenhouse Involvement

**Øresund Greenhouse's ambition is to contribute to our member universities in empowering them to develop more cross border collaborations, and also to minimise the risk for current projects of not receiving their planned funding after closing the project.**

## 1. Application

By facilitating for the project partners in the application process, we increase their chances of developing their own ideas in accordance with the overall strategy for the Interreg program. We ease the application process with hands on assistance with regards to a complete application, including model a budget in close cooperation with the partners.

## 2. Implementation

Working with several projects has enabled us to develop tools and methods for simplifying tasks and improving the implementation phase. We work actively with creating routines that ensure funding for the partners expenses. The financial administration in Interreg is perceived as being complicated. It is unlike any other EU-project, for which the universities' administration is adjusted for.

In order to avoid misinterpretations and to create stringency in the implementation, Øresund Greenhouse offer to manage the more demanding parts of the projects financial administration such as requisition and reconciliation. We also offer to coordinate and

lead activities to ensure that the project plan is implemented correctly so that funding is granted.

Furthermore, Øresund Greenhouse offer continuous help and advice to the partners with the financial administration, sharing our experiences from working and being involved with other Interreg funded projects.

## 3. Øresund Greenhouse as a project partner

Øresund Greenhouse offers the partners to administer and lead the process of the project. By being an active part, we combine the interest of implementing the project with the experience that we have got from practical implementation with regards to financial administration and reporting to the program.

To take responsibility for the financial administration and the requisition in the project, it is a requirement that Øresund Org is the Lead Partner, because of inflexibility and limited scope for adjustments in the program.

## Øresund Greenhouse – a part of Øresund Org

Øresund Org brings universities, businesses and authorities together. We create networks and projects that shape your future. We are a Danish-Swedish organisation, founded in 1997 by the universities in the Øresund region. Today Øresund Org is an engine for growth and development in knowledge intense areas.
